## WATERPROOFING COATING PRODUCTS FOR CONCRETE AND MASONRY

DECORATIVE AND PROTECTIVE COATINGS

NEW CONSTRUCTION

RESTORATION

MAINTENANCE

### CHEMSEAL

Waterproof heavy duty cement-based coating for sealing and finishing masonry and concrete. **CHEMSEAL** is effective above or below grade interior or exterior. It is also an effective and durable waterproofing for water processing and storage structures. Because it is a cement-base, it actually becomes part of the wall, imparting strength and great durability as well as waterproofing. **CHEMSEAL** breathes, avoiding water vapor build-up which can cause blistering, peeling and frost damage. Exceptional filling qualities can eliminate the need to tuckpoint old brick.

### TEXTURED II

Decorative 100% acrylic texture-coating for concrete masonry and stucco. Ideal finish coat for **CHEMSEAL** products. Outlasts conventional paints 2 to 1. Fade resistant colors. Hides surface defects. Fine, medium and coarse textures.

### COLORCOAT

The same long life acrylic formula as Textured II in a flat finish.

### CHEMSEAL TROWEL & SPRAY GUIDE

Waterproof cement plaster for finishing concrete and creating a monolithic (no mortar joints showing) surface on concrete block or brick. Sand-float finishes or any trowel or spray texture may be obtained. Available in white, light gray and foundation gray. Special colors available on quantity orders.
