

Polished Concrete

Quality • Innovation • Service

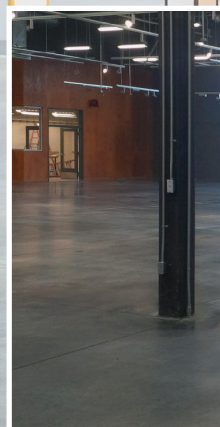

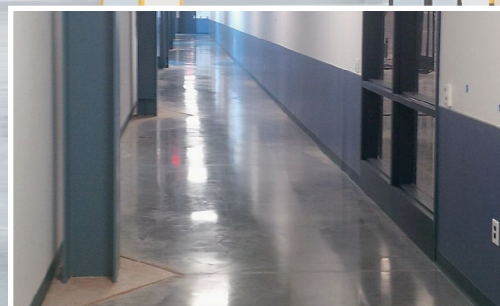

Your Trusted Partner to Cure, Densify, Repair & Protect Polished Concrete

ChemMasters understands the special challenges facing polished concrete contractors. In order to produce highly refined surfaces you need a team of highly refined concrete curing, preparation, repair and protection chemicals.

Whether it's new construction or an existing renovation, ChemMasters has the knowledge, experience and products you need to consistently produce high quality

polished substrates that meet and surpass demanding customer expectations.

From start to finish, ChemMasters is your partner throughout the concrete curing, repair and polishing process, with reliable products to "guard" your work and keep it looking attractive for years to come.

Cure

EZ Strip Cure^{DR}

Curing compound for freshly placed concrete to be polished. Will not clog or load diamond tooling and does not require removal prior to polishing.

Densify

Chemisil™

Clear, sodium silicate hardener, densifier and dustproofer for concrete.

StarSeal® PS Clear

Chemically reactive solution of potassium-silicate to harden, densify and increase the service life of concrete
Specifications: ASTM C672; ASTM C642; ASTM E96; Fed. Spec. SSW 110C; USDA when cured

Chemisil™ Plus Li

Chemically reactive solution of lithium-silicate with added silicate to harden, densify and increase the service life of concrete. Resists white salt adhesion. Penetrates more deeply than other silicate densifiers.
Specifications: ASTM C672; ASTM C642; ASTM E96; Fed. Spec. SSW 110C; USDA when cured

StarSeal® Fusion

Chemically reactive silicate crack and hole repair.

Repair

ChemSpeed™ 75

One component, rapid setting, high performance mortar with high early strength for structural repair and form & pour applications. Fast repairs of 1/2" to full depth. Cures down to 20° F. Accepts rubber wheel traffic within 2 hours.

Polyweld™ Primer

Primer for self-leveling cementitious overlayers.

Level Top™ Supreme

Polishable, self-leveling, pumpable, gypsum free overlayerment. Place at depths of feather edge to 4".

Protect

Chemisil™ Plus OR

Chemically reactive, oil, grease and chemical resistant treatment for concrete. Fully penetrating, non-film forming stain protection for use on floors treated with ChemMasters Chemisil and Chemisil Plus Li hardener/densifiers.

ChemGuard™

ChemGuard represents a quantum leap in polished concrete floor “guard” technology. Competitive products are blends of commercially available polymers and siliceous materials.

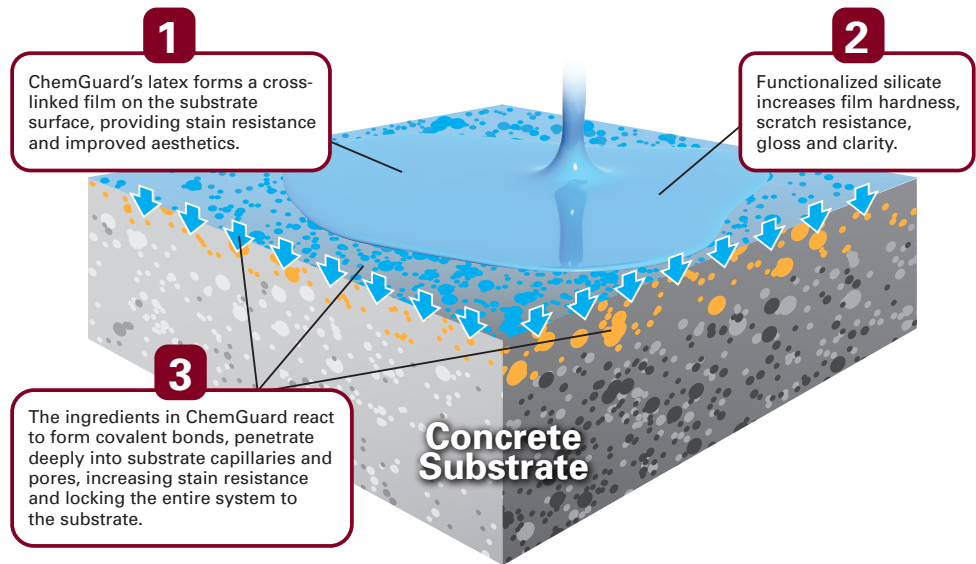

By comparison, ChemGuard is formulated with customized polymers, hybridized silicates, and organically reacted colloidal silica; all of which have been synthesized for the express purpose of working in concert with one another to protect and enhance polished concrete floors. The result is a penetrating guard with superior stain & chemical resistance, durability, repairability and gloss.

ChemGuard Protection – Simple as 1-2-3

ChemGuard prolongs the life of decorative concrete floors and improves their aesthetics.

- Superior Stain & Chemical Resistance
- Increased Abrasion Resistance & Durability
- Easily Repaired & Re-Coated
