

ChemMasters Curing Compound Improves the Appearance of Diamond Polished Concrete & Reduces Costs

Aesthetics are everything when it comes to polished concrete intended for commercial and retail environments. Achieving those aesthetic expectations is made more difficult when adhering to ASTM C309 curing specifications. Particularly for integrally colored concrete.

The use of common concrete cures often results in an unacceptably uneven, blotchy appearance. These cures also require removal with chemical strippers in confined, interior locations prior to diamond polishing.

That is a costly and potentially hazardous process.

When National Contracting and Trader Joe's grocery stores searched for a solution to this problem, they found the perfect answer; water-based **EZ Strip Cure DR** from ChemMasters.

EZ Strip Cure DR cures newly installed concrete to ASTM C309 specifications leaving a reliably attractive appearance, even on integrally colored concrete.

And unlike traditional cures, **EZ Strip Cure DR** won't clog or load diamond tooling, which means it doesn't require removal prior to beginning the polishing process.

EZ Strip Cure DR does not require removal from floors that are to be diamond polished.

Job Description: Curing of freshly placed concrete intended to be diamond polished. Produce an even, attractive appearance on integrally colored concrete. Meet curing specifications, save time, reduce costs and eliminate the need for harsh chemical strippers.

Jobsite: Trader Joe's Grocery Stores

Contractor: National Contracting Corp.

Distributor: National Contracting Corp.

Product: ChemMasters **EZ Strip Cure DR**

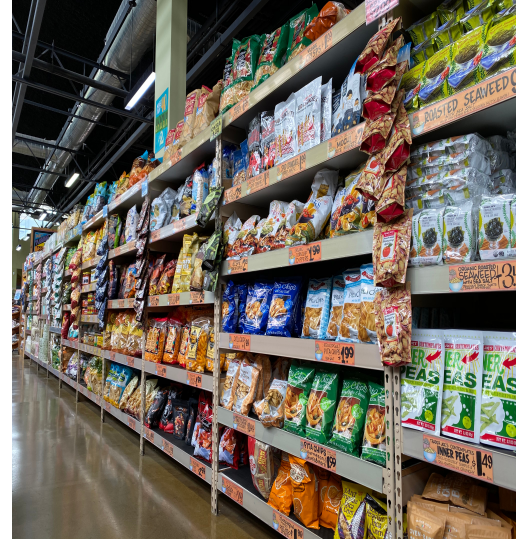

EZ Strip Cure DR does not require UV exposure to dissipate and can be easily removed from indoor and outdoor surfaces.

Using **EZ Strip Cure DR** to cure freshly placed concrete intended for diamond polishing will:

- Meet architectural or engineering curing specifications
- Save time
- Improve appearance
- Eliminate the need for harsh chemical strippers
- Increase safety
- Lower costs

Visit the ChemMasters website at www.chemmasters.net to learn more about **EZ Strip Cure DR** and use our "Find a Distributor" tool to locate a distributor near you.

EZ Strip Cure™ DR

EZ Strip Cure DR is a water based, low V.O.C. low odor curing compound for smooth trowel finished fresh concrete which aids in cement hydration, then quickly dissipates for easy removal to allow subsequent application of floor coverings, penetrating sealers, high performance coatings or waterproofing treatments. Does not require removal from floors that are to be diamond polished.

Uses

Retains moisture to improve cement hydration for improved strength, durability and appearance while reducing shrinkage.

Use on concrete scheduled for polishing or to receive subsequent treatments of dustproofers, liquid hardeners and densifiers, penetrating water repellents, polymer coatings or various floor coverings

Advantages

- Does not require removal from floors that are to be diamond polished
- Cures concrete to ASTM C309 specifications
- Produces a consistent, attractive appearance
- Use on both interior and exterior applications
- Does not require UV exposure
- Easily removable with light mechanical abrasion
